

Data and performance for the requesting of the Whitelist

Explanatory Notes

This page regulates, for *UCI Request WHL*, what in the [relevant page in the](#) Applicatie layer is regulated for *UCI Request CPL*, *UCI Request OCL* and *UCI Request DSNL*.

1. *MedMij System Node* is addressed in *UCI Request WHL* with the hostname stelselnode.medmij.nl. The URI of the *Whitelist* is https://stelselnode.medmij.nl/MedMij_Whitelist.xml
2. The participation of *MedMij System Node* in *UCI Request WHL* is available at least 99.9% of the time. If the participation referred to becomes unavailable then *MedMij Management* will allow a maximum of eight hours (480 minutes) to elapse before it is available again.
3. In the event of such an incident, *MedMij Management* informs *Publishers*, *Sources* and *Readers* that the incident has occurred and tells them the expected downtime. *MedMij Management* informs the parties about scheduled maintenance that will lead to temporary unavailability.
4. If *MedMij System Node* in *UCI Request WHL* is unavailable then the relevant requesters may use the most recent copy of the relevant list in the cache for a maximum of 10 hours.

Explanatory Notes

The *Whitelist* is not designed to block compromised nodes. In these cases, the relevant certificate must be revoked, the systems cleaned up and a new certificate installed. This is why - for the downtime referred to in this responsibility - the lagging behind of the content of the *Whitelist* is not a security risk.
